

We are seeking volunteers to study the effect of patellofemoral pain on neural control strategies of your muscles.

## Experimental Setup

Isometric knee extension

Single leg squat (holding)

## Why is this relevant?

- ❖ Understand the neural control of movement and effect of patellofemoral pain
- ❖ Will help us to design treatment interventions and strategies to manage patellofemoral pain

## Get Involved!

Respond to our survey and we will contact you!

\* you will be remunerated with a **\$30** gift voucher

Any questions, please contact:

Associate Professor Kylie Tucker: [k.tucker1@uq.edu.au](mailto:k.tucker1@uq.edu.au)

Ella Hill: [ella.hill@uq.net.au](mailto:ella.hill@uq.net.au)

**Aim:** To investigate the differences in movement control in people with and without patellofemoral pain

**Who can participate?**

- ✓ 18-35 years old
- ✓ Males and females
- ✓ History of running (>3 years)

**What will we do?**

- ❖ High-density surface muscle activity – these sensors or grids are placed over the skin
